DETAILED ACTION

Allowable Subject Matter

Claims 1-13 are allowed.

The prior art does not teach or suggest a measuring electrode arrangement defined by the combination of elements as recited in independent claims 1 and 13, including a measuring electrode having a space filled with a contact medium between the measuring electrode and an area of contact, a storage space located on the side of the measuring electrode opposite the area of contact filled with a contact medium, wherein the measuring electrode is partially permeable for the contact medium contained in the storage space. Watanabe (US 3580239) teaches an electrode having a storage space filled with a contact medium, but fails to teach a space filled with a contact medium on one side of the measuring electrode and a storage space containing a contact medium on the other side of the measuring electrode. Carmon (US 4362165) teaches an electrode arrangement having a space [14] filled with a contact medium between a measuring electrode [16] and an area of contact and a storage space [14 above element 16, Fig. 2] filled with a contact medium on the opposite side of the measuring electrode [Fig. 2]. However, Carmon fails to teach the measuring electrode being semi-permeable to the contact medium.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

US 4362165 A Carmon; Amiram et al. Stable gel electrode
